Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from A Marketing Survey and Assessment of the Potential for Desulfurized Illinois Coal Air pollution regulations of the past two decades have had a big impact on coal markets. Most coal is used for industrial and electric utility combustion, and coal combustion accounts for major shares of the particulates, sulfur and nitrogen oxides, and certain other pollutants released into the atmosphere. Pollution regulations have induced many industries and utilities to use cleaner coals or shift to other fuels. Illinois contains more coal reserves than any other state. Illinois coal can be shipped cheaply to midwestern industries and utilities and its combustion qualities generally are good. But, most of the coal in Illinois contains too much sulfur to be burned alone under federal air pollution standards. utilities and industries have turned increasingly to lower sulfur alternatives, from the East or West, to fuel their furnaces. The market for coal from Illinois has stagnated while the overall market for coal has grown. Renewal of Illinois coal industry depends on overcoming the sulfur problem.
