de Gruyter Mouton, 01.01.1999., 1999. gebunden. Book Condition: Neu. The subject of this Handbook is special languages. It deals with the following topics from various perspectives: their systematic constitution, their uses in oral and written (specialized) texts within the pragmatic framework of specialized (and non-specialized) communication, their lexicological arrangement in dictionaries and data banks and, finally, their investigation in the past and present. The reason for the emergence of special languages is generally sought in the specialization of human activities brought about by the division of labour, and by linguistic communication about these activities. Initially, special languages developed in connection with the acquisition of food and the satisfying of other basic needs, the manufacture and naming or description of tools and implements. In this early phase, special language is to an extent identical to specialized vocabulary and phraseology. It is possible to speak of crafts and their special languages as soon as people no longer satisfy only their own needs, but when whole social (professional) groups make their living primarily through specialized activities and through barter and trade. The need for specialized communication leads to the creation of special text types. With the rise of technology, the special languages of crafts are integrated into the modern special languages of technology. The decisive phase in this development was the Industrial Revolution (18th/19th centuries). Since then, a tremendous expansion of terminology has occurred in the special languages of technology, and the range of specialized text types has also considerably increased. The special languages of the natural sciences emerged after the abandonment of learned Latin (16th/17th centuries). In these sciences the great discoveries of the 19th century brought about an expansion of special language use. The same is true of the humanities and the social sciences from the end of the 19th century...
