

Screening for Dementia: Systematic Evidence Review Number 20 (Paperback)

Filesize: 1.66 MB

Reviews

The most effective ebook i possibly go through. I am quite late in start reading this one, but better then never. Its been designed in an extremely basic way and it is just after i finished reading this ebook by which basically transformed me, modify the way i believe.

Createspace, United States, 2013. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Dementia is an acquired syndrome of decline in memory and at least one other cognitive domain such as language, visuo-spatial, or executive function sufficient to interfere with social or occupational functioning in an alert person. Multiple diseases can cause the syndrome of dementia. The large majority of people with dementia have neurodegenerative disease or cerebrovascular ischemia as the underlying cause. Between 60 and 70 of people with the dementia syndrome have Alzheimer s disease; about 20 to 30 have vascular or mixed vascular and Alzheimer s disease causes. A smaller number have other causes such as Lewy body dementia, frontal dementia, Parkinson s disease, hypothyroidism, and vitamin B-12 deficiency. To date, research has produced no effective approach for primary prevention of dementia. Chemoprevention has been advocated, but data on effectiveness are lacking. Although control of hypertension reduces the risk of cerebrovascular accidents, its role in reducing small vessel vascular dementia is less clear. The wealth of literature has been on screening for dementia with the hope of reducing its burden of suffering by earlier intervention. Routine history and physical examinations do not readily diagnose dementia during clinic or physician visits. Multiple studies in the United States and abroad indicate low identification of dementia by primary care physicians. More than 50 of patients with dementia have never been diagnosed by a physician. This raises the possibility that effective screening tests might be able to identify people with dementia at an early stage, thus allowing the possibility of earlier intervention. Key question addressed include: KQ1: Does screening for dementia in older adults (over 60 years) do any of the following: improve or worsen patients. cognitive, social, or physical function? increase or decrease hospitalizations, institutionalizations,...
