Not illustrated. 1856 Excerpt: .it is equally certain that it is only during the last forty.or fifty years that pathological anatomy has been so studied as to assume the importance of a leading and indispensable branch of medical knowledge. In such a society as this, it is, I believe, most unnecessary to dwell upon the advances made in medicine and surgery by the cultivation of pathological or necroscopic anatomy. And its uses have been various. By its light new diseases have been discovered, which were formerly all but unknown; such as emphysema of the lung, oedema glottidis, phlebitis, ramollisement of the brain, endocarditis, melanosis, etc. In other instances, it has enabled us to separate into specific diseases some affections which formerly were constantly confounded together, both in diagnosis and treatment, as the different species of inflammation of the lungs--pleurisy, pneu inonia, and bronchitis; the different diseases of the heart; the...
