

## A Process for Assessing NASA's Capability in Aircraft Noise Prediction Technology

Filesize: 7.43 MB

### **Reviews**

*This ebook could be well worth a study, and superior to other. It really is basic but unexpected situations inside the 50 % of your ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.*  
*(Prof. Buford Ziemann)*

## A PROCESS FOR ASSESSING NASAs CAPABILITY IN AIRCRAFT NOISE PREDICTION TECHNOLOGY

Bibliogov. Paperback. Condition: New. This item is printed on demand. 38 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. An acoustic assessment is being conducted by NASA that has been designed to assess the current state of the art in NASA's capability to predict aircraft related noise and to establish baselines for gauging future progress in the field. The process for determining NASA's current capabilities includes quantifying the differences between noise predictions and measurements of noise from experimental tests. The computed noise predictions are being obtained from semi-empirical, analytical, statistical, and numerical codes. In addition, errors and uncertainties are being identified and quantified both in the predictions and in the measured data to further enhance the credibility of the assessment. The content of this paper contains preliminary results, since the assessment project has not been fully completed, based on the contributions of many researchers and shows a select sample of the types of results obtained regarding the prediction of aircraft noise at both the system and component levels. The system level results are for engines and aircraft. The component level results are for fan broadband noise, for jet noise from a variety of nozzles, and for airframe noise from flaps and landing gear parts. There are also sample results for sound attenuation in lined ducts with flow and the behavior of acoustic lining in ducts. This item ships from La Vergne, TN. Paperback.
