

Architecting the Internet of Things

By Uckelmann, Dieter / Harrison, Mark

Condition: New. Publisher/Verlag: Springer, Berlin | The authors of this book provide a research perspective on current and future developments in the Internet of Things. The chapters cover a range of topics from system design aspects and core architectural approaches to end-user participation and applications. | Many of the initial developments towards the Internet of Things have focused on the combination of Auto-ID and networked infrastructures in business-to-business logistics and product lifecycle applications. However, the Internet of Things is more than a business tool for managing business processes more efficiently and more effectively - it will also enable a more convenient way of life. Since the term Internet of Things first came to attention when the Auto-ID Center launched their initial vision for the EPC network for automatically identifying and tracing the flow of goods within supply-chains, increasing numbers of researchers and practitioners have further developed this vision. The authors in this book provide a research perspective on current and future developments in the Internet of Things. The different chapters cover a broad range of topics from system design aspects and core architectural approaches to end-user participation, business perspectives and applications. | Foreword.- An Architectural Approach Towards the Future Internet of Things.-...
