## THE PRACTICAL APPLICATIONS OF ELECTRICITY, LECTURES

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: . 10. which I want. Now, to find the maximum work which can be transmitted, draw  $O A$  at such an angle with  $O X$  that its tangent is equal to twice the resistance of the whole circuit, cutting the derived curve in  $A$ . Draw the ordinate  $A C$ , cutting the characteristic curve in  $B$ ; bisect  $A C$  at  $D$ . The work expended upon the generating machine would be represented by the parallelogram  $O C B E$ , the work wasted in resistance by  $O C D S$ , and the work developed in the receiving machine by the parallelogram  $S D B E$ . When the dynamo-machine is not a series dynamo, but the currents in the armature and in the electro-magnet, though possibly dependent upon each other are not necessarily equal, the problem is not quite so simple. We have, then, two variables, the current in the electro-magnet and the current in the armature; and the proper representation of the properties of the machine will be by a lect. Vol. I. H characteristic surface such as that illustrated by this model, Fig. 11. Of the three co-ordinate axes,  $O X$  represents the current in the magnet;  $O Y$  represents the current in the armature not necessarily to the same scale, and  $O Z$  the electromotive force. By the aid of such a surface as this one may deal with any problem relating to a dynamo-machine, no matter how its electro-magnets and its armature are connected together. Let us apply the...
