These descriptions are vague and in some ways misleading; and it is necessary to define our problem more precisely before we proceed further. Let us suppose for the moment that $f(x)$ is a real continuous function of the real variable x . A little reflection shows that this problem may be analysed into a number of parts. We wish, first, to know whether such a function as y necessarily exists, whether the equation (1) has always a solution; whether the solution, if it exists, is unique; and what relations hold between different solutions, if there are more than one. The answers to these questions are contained in that part of the theory of functions of a real variable which deals with definite integrals .
