

National Survey of the Mining Population: Part I: Employees

By Centers for Disease Control and Preventi

CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 264 pages. Dimensions: 11.0in. x 8.5in. x 0.6in. The National Institute for Occupational Safety and Health (NIOSH) conducted the first comprehensive survey of the U. S. mining population in more than 20 years. The National Survey of the Mining Population captured the current profile of the U. S. mining workforce. Data collection began in March 2008 and continued through August 2008. Randomly selected mining operations in all of the major mining sectors (i. e. , coal, metal, nonmetal, stone, and sand and gravel) received the survey and had the option of completing a paper or web-based questionnaire. A total of 737 mining operations returned completed questionnaires and reported data for 9, 008 employees. Two sets of data were collected in this national survey. There were questions about the mining operation, including employee training, work schedules, the use of independent contractor employees, and mine communication and safety systems. The employee questions included demographic and occupational questions about individual employees. The survey sample data were weighted in order to provide national estimates of mine and employee characteristics. This Information Circular (IC) is published in two parts Part I: Employees presents the...
